

Heat Pump Rebates for Cooperative Members

\$400
HEAT PUMP
REBATE

North Central Electric Cooperative is offering rebates to cooperative members who install a new heat pump* for heating and cooling in a home, office, or other building. A heat pump is an energy-efficient system designed to provide year-round comfort in your home. In the winter, the heat pump provides warm, comfortable heat. In the summer, it becomes a central air conditioner, extracting heat from inside your home and pumping it outdoors.

This rebate is available only to members. Members must install the ENERGY STAR®-qualified equipment.

SPECIFIC REQUIREMENTS: The heat pump must be a central system meeting current minimum federal appliance efficiency standards and at least a 16 SEER ENERGY STAR rating. The equipment must be rated and certified by the Air Conditioning and Refrigeration Institute (ARI) or Canadian Standards Association (CSA).

Dealers must provide to customers as part of the sales-installation agreement: the owner's manual, operating instructions, and warranty information, and they must offer a maintenance-service contract.

All rebates are issued in the form of a check. A maximum of two rebates per residential member's home is available.

*North Central's rebate on heat pumps is limited. The offer expires when funds are depleted on a first-come, first-served basis, or when the program is discontinued.
